

Week 1 Report — Problem Identification & Research

Programme: IIMSTC – IoT & Embedded Systems (Cohort 4)

Team Size: 15 Members

Krithi	Harsha Vardhan S	Ananya Chandrashekar
Vijetha	Palaparthi Krishna Vamsi	Durga Prasad S
Sachidananda M M	Ramitha R	Nagaraju M
Hadiya Khan	C Pavitra	Charan B S
S Vidyashree	Abhinav P	Sachin Murchavar

Day 1 — Team Formation & Problem Selection

As part of Phase 2 of the internship, the group of 15 members was divided into smaller teams of three to encourage focused brainstorming and idea generation. Each team discussed multiple problem statements and finalized one idea as their proposal. These proposals were then presented to the entire group, resulting in a total of five distinct problem statements.

Day 2 — Research & Idea Presentation

Each member conducted individual research related to their team’s selected problem area. This was followed by a group discussion where insights were shared, and problems were analyzed in depth. Based on this, each team refined their ideas and presented proposed solutions to the larger group.

Day 3 — Problem Shortlisting

A collaborative session was held to evaluate all five proposed problems. Through discussion and analysis, three problems were shortlisted based on relevance, impact, and feasibility. These shortlisted problems were presented, along with brief explanations of their approach and implementation strategies.

Day 4 — Problem Finalization & Implementation Planning

The team critically evaluated the three shortlisted problems and finalized one based on real-world applicability and practical feasibility. After selection, the focus shifted to implementation planning, where the team discussed possible approaches, conducted additional research, and explored effective methods to solve the problem.

Day 5 — Feasibility Analysis & Gap Identification

Each member independently researched existing solutions related to the selected problem. The findings were shared and analyzed collectively. This helped identify limitations, challenges, and gaps in current systems. Based on this evaluation and mentor feedback, the team reconsidered certain aspects of the initial project direction.

Day 6 — Exploring New Problem Areas

To ensure a more effective and innovative solution, the team explored alternative problem areas. Individual research was conducted to gather new ideas and perspectives, creating a strong foundation for making a more informed and strategic decision in the upcoming phase.

Summary

Week 1 focused on structured problem identification, collaborative research, and critical evaluation. The process evolved from broad idea generation to refined problem selection, while also highlighting the importance of feasibility analysis and adaptability in innovation.
